

LandingZone Demo

Shared source-of-truth repository for Terraform modules, reusable Azure DevOps pipeline templates, and reference patterns used across the workspace.

Current Scope

- Hosts reusable Terraform modules under `modules/`
- Hosts shared pipeline templates under `templates/`
- Keeps example and reference material for new repo creation
- Acts as the remote template source used by other workspace pipelines

Key Files

- `modules/`
- `templates/shared-runner-hygiene.yml`
- `examples/`
- `docs/`
- `azure-pipelines.yml`

Notes

- This repo intentionally keeps its example content because it is the shared template source for the rest of the workspace.
- Consumer repos now reference shared pipeline templates from this repo instead of carrying duplicated copies.
